Mobeen Nasir

BS Biotechnology — Scholarship Applicant

Multan, Pakistan | +92 313 6701631 | mubeennasir117@gmail.com

linkedin.com/in/mobeennasir | github.com/mobeennasir

PROFILE

Final-year BS Biotechnology student at Bahauddin Zakariya University, Multan, applying for fully funded master's programmes abroad. Research interests in applied microbiology, bioremediation, and plant-growth-promoting rhizobacteria (PGPR), supported by hands-on wet-lab internships and self-directed bioinformatics work.

EDUCATION

BS Biotechnology 2023 – 2027 (expected)

Bahauddin Zakariya University (BZU), Multan, Pakistan

- CGPA 3.73. Coursework focus on molecular biology, genetics, and bioinformatics.

Intermediate (Pre-Medical) 2021 – 2023

KIPS College

- Higher secondary education, pre-medical stream.

RESEARCH EXPERIENCE

Independent Researcher, Computational Biology Sep 2026 – Present

Self-directed

- Building bioinformatics pipelines for variant interpretation, including the LDLR prioritization project below.

Volunteer Intern 31 Jul – 25 Aug 2026

Soil Microbial Resources and Ecology Laboratory, Land Resources Research Institute (LRRI), NARC, Islamabad

- Four weeks of hands-on work in basic microbiological techniques: bacterial isolation, purification, and biochemical characterization.

Research Intern 15 Jun – 30 Jul 2026

National Institute for Genomic & Advanced Biotechnology (NIGAB), NARC, Islamabad

- Internship on “Basic Molecular Biology Techniques”: PCR, tissue culture, and core microbiology methods.

PROJECTS

LDLR Variant Prioritization Pipeline 2026

Independent project — github.com/mobeennasir/LDLR-Variant-Prioritization

- Python pipeline prioritizing LDLR variants linked to familial hypercholesterolemia: narrows 1,187 candidate variants to 222 high-confidence pathogenic calls through layered evidence filters.

PREPRINTS

Nasir, M. (2026). *A High-Throughput Programmatic Pipeline for Computational Reclassification of Variants of Uncertain Significance in LDLR: Structural Evidence for Disruption of the LDL-Receptor Class A Ligand-Binding Repeats.* Zenodo. doi.org/10.5281/zenodo.23323333

MANUSCRIPT UNDER REVIEW

Nasir, M. (2026). A High-Throughput Pipeline for Computational Reclassification of Variants of Uncertain Significance in LDLR: Structural Evidence for Disruption of the LDL-Receptor Class A Ligand-Binding Repeats. Under review, Journal of Human Genetics. Manuscript ID: JHG-26-815. Submitted 29 October 2026. Preprint: Zenodo, doi.org/10.5281/zenodo.23323333.

TECHNICAL SKILLS

Laboratory	Molecular biology, PCR, tissue culture, microbiology (isolation, purification, biochemical characterization)
Bioinformatics	Python (modular CLI tools), BLAST, Entrez Direct, NCBI Datasets, Git, Linux/WSL
Other	Scientific writing, data analysis

CERTIFICATIONS

Nov 2026	Command Line Tools for Genomic Data Science — Johns Hopkins University via Coursera
Nov 2026	Introduction to Industrial Bioprocess Development — Technical University of Denmark via Coursera
Nov 2026	Algae Biotechnology — University of California San Diego via Coursera
Oct 2026	Industrial Biotechnology — University of Manchester via Coursera
Jul 2026	Introduction to Genomic Technologies — Johns Hopkins University via Coursera
Jul 2026	Introduction to Data Analysis using Microsoft Excel — Coursera project certificate

LANGUAGES

Urdu	Native
English	Fluent

PERSONAL DETAILS

Date of birth	18 February 2006
Nationality	Pakistani
